Chennai, India · +91 93445 60523

adith7301@gmail.com · [LinkedIn](#) · github.com/Adith-Senthil-kumar · [Portfolio](#)

PROFILE

I am a Computer Science graduate with hands-on experience building full-stack applications across frontend, backend, and database layers. I enjoy learning by building, and I'm increasingly drawn to integrating AI into practical, everyday workflows. I'm looking for an opportunity to grow as a software engineer while contributing wherever I'm needed.

EDUCATION

Bachelor of Engineering in Computer Science

St. Joseph's Institute of Technology, Chennai

2026

CGPA: 7.8

TECHNICAL SKILLS

Languages	Dart, Python, Java, JavaScript, C
Frameworks	Flutter, React, React Native, Expo, Vite, Tailwind CSS
Backend	REST APIs, Node.js, Flask, Firebase (Firestore, Auth, Hosting), SQL, MongoDB, SQLite
AI / LLM	Google Gemini API, Vertex AI, Scikit-learn, TinyBERT (NLP)
Other Tools	BLoC (State Manager), GitHub Actions, GitHub, Figma, Vitest, Claude Code

ACHIEVEMENTS

- Finalist, Ekathon 2025 Hackathon — SmartHealthLink
- 3rd Place, Chennai Police Hackathon — Cyber Threat Intelligence System

EXPERIENCE

Cornerstone Engineering Solutions — Mobile Application Developer Intern

Dec 2024 – Feb 2025

- Built and deployed role-based access control using Firebase Authentication, enforcing per-user permissions.
- Integrated Firebase Realtime Database and external API endpoints to power dynamic, location-based tracking features.
- Applied the BLoC (Business Logic Component) pattern for scalable, maintainable state management across modules.

JSK Tax Consultants — Application Developer Intern

Chennai, India · May 2025 – June 2025

- Designed and implemented a Cloud Firestore (NoSQL) schema from scratch for the app's data model.
- Built and deployed a Windows desktop application in Flutter, configuring Firebase Authentication.
- Integrated the app with Firebase back-end services to enable real-time data read/write operations.

PROJECTS

SmartHealthLink

Flutter, Firebase, Python, Scikit-learn

- AI-driven family health monitoring system turning individual wearable tracking into a shared, alert-driven family ecosystem.
- Real-time vitals from wearables (Google Health Connect) into a multi-profile dashboard, with automated caregiver alerts.
- Stacked-ensemble ML model predicts hereditary health risk at 90.2% accuracy; peer-reviewed, IEEE I3CTCON 2026.

Cyber Threat Intelligence System

Python, TinyBERT, NLP, MongoDB, Flask

- Scalable CTI system that watches open-web sources and turns raw chatter into prioritised, actionable threat intelligence.
- Custom crawler + NLP pipeline (keyword pre-filter, fine-tuned TinyBERT classifier) sorting threats into four severity levels, with a Flask dashboard and automated alerts.
- 90.2% accuracy (0.924 AUC-ROC) across 9,560 crawled pages; peer-reviewed and published, CCIC 2026.

BusBuddy

Flutter, Firebase

- School bus management platform where one login fans out into three role-based apps — Admin, Parent, and Driver.
- Admin fleet console for buses, drivers, students, and routes, plus live GPS tracking and QR-code attendance.
- Reports and analytics (fl_chart) for fleet occupancy and attendance, with light/dark theming and push notifications.

Finmatrix

Python, Flask, MongoDB, Flutter

- Full-stack client-management app for tracking client data and work status from one centralized dashboard.
- Designed and built the Flask REST API back end — endpoints, request/response models, and auth — over MongoDB.
- Cross-platform Flutter client with forms for updating service status and monitoring progress in real time.

Quillix

React, Firebase, Node.js, Google Gemini API, Vitest

- Built and led development of Quillix, a production GST-compliance and bookkeeping SaaS used by an Indian chartered-accountancy firm to file returns and sync with Tally.
- Architected 35 Cloud Functions and a 49-collection Firestore data model powering an 8-module GST compliance and bookkeeping workflow.
- Raised OCR accuracy from 97.1% to 99.4% via a synthetic-ground-truth eval harness that slices prompts directly from deployed source, preventing drift.

Other projects: GymOS — offline-first workout & nutrition tracker (React Native, TypeScript, SQLite).
