

ADITH SENTHIL KUMAR

Chennai, India

adith7301@gmail.com · linkedin.com/in/adith-senthil-kumar · github.com/Adith-Senthil-kumar · [Portfolio](#)

PROFILE

Computer Science graduate who enjoys learning by building real projects, across front end, back end, and databases. Comfortable picking up new languages and tools quickly, and looking for an opportunity to grow as a software engineer while contributing wherever I'm needed.

EDUCATION

Bachelor of Engineering in Computer Science

St. Joseph's Institute of Technology, Chennai

2026

CGPA: 7.8

Higher Secondary Education

St. John's Public School, Chennai

Aug 2022

TECHNICAL SKILLS

Languages Dart, TypeScript, Python, Java, C

Frameworks Flutter, React Native, Expo

Backend & Data REST APIs, Flask, Firebase (Firestore, Auth, Hosting), SQL, MongoDB, SQLite

State & Tools BLoC, Git, GitHub, Figma

EXPERIENCE

Cornerstone Engineering Solutions

Dec 2024 – Feb 2025

Mobile Application Developer Intern

- Engineered and deployed role-based access systems using Firebase Authentication.
- Integrated Firebase Realtime Database for dynamic, location-based tracking features.
- Applied the BLoC pattern for scalable, maintainable state management across modules.

JSK Tax Consultants

Chennai, India · May 2025 – June 2025

Application Developer Intern

- Built and deployed a Windows application in Flutter, integrated with Firebase backend services.
- Designed the Firestore schema, configured authentication, and enabled real-time data operations.
- Deployed via Firebase Hosting for scalable, reliable delivery.

PROJECTS

SmartHealthLink

Flutter, Firebase, Python, Scikit-learn

- AI-driven family health monitoring system turning individual wearable tracking into a shared, alert-driven family ecosystem.
- Real-time vitals from wearables (Google Health Connect) into a multi-profile dashboard, with automated caregiver alerts (Firebase Cloud Messaging).
- Stacked-ensemble ML model predicts hereditary health risk at 90.2% accuracy; peer-reviewed and published, IEEE I3CTCON 2026.

BusBuddy

Flutter, Firebase

- School bus management platform where one login fans out into three role-based apps — admin, parent, and driver.
- Real-time GPS bus tracking and QR-code attendance over a shared Firebase backend (Firestore, Cloud Functions, Messaging).
- 204 unit tests across the shared data layer and app flows.

Cyber Threat Intelligence System

Python, TinyBERT, NLP, MongoDB, Flask

- Scalable CTI system that watches open-web sources and turns raw chatter into prioritised, actionable threat intelligence.
- Custom crawler + NLP pipeline (keyword pre-filter, fine-tuned TinyBERT classifier) sorting threats into four severity levels, with a Flask dashboard and automated alerts.
- 90.2% accuracy across 9,560 crawled pages; peer-reviewed and published, CCIC 2026.

StayTrack

React Native, TypeScript, Firebase

- Full-stack, cross-platform app that runs an entire PG/hostel property from one real-time dashboard, live at staytrack-caiac.web.app.
- Owner-scoped Cloud Firestore backend with real-time listeners and hardened security rules covering rent, staff payroll, bookings, and maintenance.
- 44 unit tests; deployed to Firebase Hosting (web + mobile from one codebase).

Finmatrix

Python, Flask, MongoDB, Flutter

- Full-stack client-management app for tracking client data and work status from one centralized dashboard.
- Designed and built the Flask REST API back end — endpoints, request/response models, and auth — over a MongoDB (NoSQL) database.
- Cross-platform Flutter client consuming the API for real-time status updates.

Other projects: GymOS — offline-first workout & nutrition tracker (React Native, TypeScript, SQLite).
